

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or its agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of notice by checking below:

NOTICE OF INTENTION TO TEST CASING SHUT-OFF	<input checked="" type="checkbox"/>	NOTICE OF INTENTION TO SHOOT OR CHEMICALLY TREAT WELL	
NOTICE OF INTENTION TO CHANGE PLANS		NOTICE OF INTENTION TO PULL OR OTHERWISE ALTER CASING	
NOTICE OF INTENTION TO REPAIR WELL		NOTICE OF INTENTION TO PLUG WELL	
NOTICE OF INTENTION TO DEEPEN WELL			

Hobbs, New Mexico

December 4, 1936

Place

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intentiton to do certain work as described below at the _____

Empire Oil & Refining Co. Walden Well No. 1 in SE NW 1/4
Company or Operator Lease
of Sec. 21, T. 22, R. 37, N. M. P. M., South Eunice Field,
Lea County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

On December 4, 1936 we set 7" casing at 3393' and cemented with 100
sacks of common oil well cement. We will test for casing shut off December 7, 1936

Approved _____, 19____
except as follows:

OIL CONSERVATION COMMISSION,

By _____

Title _____

Empire Oil & Refining Company

Company or Operator

By _____

Position District Clerk

Send communications regarding well to

Name D. D. BodieAddress Hobbs, New Mexico

1. Introduction

1.1. Background

1.2. Objectives

The purpose of this study is to investigate the effects of various factors on the performance of a system. The study aims to identify the key factors that influence the system's performance and to develop a model that can predict the system's performance based on these factors.

2. Methodology

The methodology used in this study is a combination of experimental and analytical methods. The experimental method involves the collection of data from a series of experiments, while the analytical method involves the development of a mathematical model that can predict the system's performance.

2.1. Data Collection

The data was collected from a series of experiments conducted under different conditions. The conditions were chosen to represent a range of possible operating conditions for the system.

2.2. Model Development

The model was developed using a combination of statistical and mathematical techniques.

2.3. Results

2.4. Discussion

The results of the study show that the system's performance is significantly affected by the factors investigated. The model developed in this study can be used to predict the system's performance under different conditions, which can be useful for the design and optimization of the system.

3. Conclusion

The study has shown that the system's performance is significantly affected by the factors investigated.

The model developed in this study can be used to predict the system's performance under different conditions.
