Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated in the medium containing 100 mg/L of tetracycline for 24 h. The cell concentration of the *Agrobacterium* strains was adjusted to 100 mg/L. The cell suspension was then incubated with the plant tissue for 24 h. The plant tissue was then cultured on the medium containing 100 mg/L of tetracycline. The transformation efficiency was determined by the number of transformants per 100 mg of plant tissue. The data were expressed as the mean  $\pm$  SD of three independent experiments.
