# THEORY OF THE EARTH AND ITS HISTORY

## CHAPTER I. THE EARTH AND ITS HISTORY

The earth is a sphere, and its history is the history of the changes which have taken place in its form and position since its origin. The history of the earth is divided into three main periods: the primary, the secondary, and the tertiary. The primary period is the earliest, and is characterized by the formation of the earth's crust and the development of the primary life. The secondary period is the middle period, and is characterized by the development of the secondary life. The tertiary period is the latest, and is characterized by the development of the tertiary life.

The primary period is the earliest, and is characterized by the formation of the earth's crust and the development of the primary life. The secondary period is the middle period, and is characterized by the development of the secondary life. The tertiary period is the latest, and is characterized by the development of the tertiary life.
