DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to acidize open hole from 3541' to 3665' with 500 gallons acid in an effort to increase production. Production is now 2 BOPD.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
