Casing was perforated from 6810 to 7029 with 4 shots per foot. Perforations were washed with 500 gallons of mud acid. Greatest casing perforations with 500 gallons 15% regular acid. All flowed 352 bbls. oil, 192 bbls. new oil, 5 hours through 3 7/8" choke.

Well was drilled to a total depth of 7130 and cement was drilled out to 7129.

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.
