 Well No. 1 is located 660 ft. from N line and 1980 ft. from E line of sec. 19  
22-S 38-E N.M.M.  
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Drinkard Lea New Mexico  
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3369 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total depth 5720' - 1140 (Plug set back from 7517'). 7" casing cemented at 5673' with 350 sacks. The cement plug in casing was not drilled and the casing has been perforated from 5595' to 5590' with 72 holes. After swabbing down there was a slight show of oil from this section. We now desire permission to acidize through this perforated section in effort to complete this well as a commercial producer.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
