The elevation of the derrick floor above sea level is 3369 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth 5630' - Lime (Top of cement plug in 7" casing).

Before acid treatments well swabbed approximately 20 gallons drilling water per hour with slight amount of oil.

Well was acidized in 5 stages. First stage 5-16-45 with 500 gallons acid from 5580-5595', after which well tested 19 barrels fluid .2% BSW open flow through casing in 5 hours with gas volume est. 3,700 cu. ft. per day. Tubing was pulled and casing was perforated with 72 shots from 5625-5610', and 2" tubing with packer set at 5603' with 3' perforations at 5617'. After second acid stage on 5-26-45 with 500 gallons from 5610-5625' a 7" Baker Production packer was set at 5602'.

(See reverse side)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

By Tellie Pharr

Title Dir. of Prod. Foreman

Tubing was pulled and 2" tubing with perforations #1 5620, was run. Third well string was on 5-29-45 with 250 gallons from 5610-5625. After which well bailed water only, with small amount of gas. Well tested acid stage on 5-31-45 with 1000 gallons from 5610-5625. After which well bailed water only, with small amount of gas. Well tested 28 barrels of pipe line oil through tubing and casing in a 24 hour cycle 798,300 cu. ft. gas. Killled well and unseated packer and cased perforations 10, with result of well flowing 11 barrels in 12 hours through 3/4" choke with gas volume 678,800 cu. ft. from both perforated sections (5580-5625), and 5610-5625). Well was killed and Baker production Baker drilled out. 7" casing was perforated with 66 notes from 5595-5610. Making entire section from 5580 to 5625, perforated. Run 2" tubing with 3" perforations set at 5616, after which well flowed approximately 2000 cu. ft. gas per day with small amount of water.

After casing off stage on 6-18-45 with 10,000 gallons injected through casing, from 5580 to 5625, well flowed 79.3 barrels fluid in 12 hours through casing which 3" open gate. Last 8 hours produced 39.4 barrels, 19.6 BSW or at rate of 100 barrels oil per day with gas volume 11,700 MCF per day or 600,000.
