(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 3407 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth, 7368' - Lime. 7" casing cemented at 6881' with 600 sacks.

Well was previously acidized with total of 12,000 gallons in 2 stages. We now desire permission to acidize with approximately 14,000 gallons from 6881 to 7368' in an attempt to increase production and make the well flow.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
