Re: Texaco Inc. A.H.Blinebry NCT-2 #5-M 29-22-38
Tubb O&G Pool

The above-referenced well keeps showing up in the gas proration schedule as a NC in the Tubb Pool.

I wrote to you last Dec. about this same situation and you removed it and for several months it did not appear.

This is a downhole commingled well
Blinebry O&G, Tubb O&G and South Brunson Drkd/Abo.
All zones are classified as oil and currently have an allowable in the oil proration schedule.

Texaco is reporting the production correctly on their C-115 but it appears Northern is picking up the Blinebry and Tubb gas production and reporting it as all from the Tubb on their C-111.

The well needs to be removed from the gas proration schedule one more time.

I have attached copies of Texaco C-115 and Northern C-111 for June which verify the above.

Thanks for your help.
