Re: Application to Dually Complete Gulf  
Oil Corporation's Drinkard "B" No. 1,  
Blinebry Gas and Drinkard Oil Pools,  
Lea County, New Mexico.

Gentlemen:

By this letter of application, Gulf Oil Corporation wishes to state the following:

(a) That Gulf Oil Corporation's Drinkard "B" No. 1, located in the SE/4 SE/4 of Section 30-22S-38E, was completed on December 4, 1945 at a total depth of 6521'. The attached Exhibit "A" shows the location of this well on the Gulf Oil Corporation's Drinkard "B" Lease together with the location of all offset wells. The attached Exhibit "B" shows a diagrammatic sketch of the proposed dual completion.

(b) That subject well has 7" casing set at 6425' and cemented with 700 sacks of cement. The well is an oil well producing from the open hole interval from 6425 - 6521' from the Drinkard formation in the Drinkard Pool.

(c) That the applicant proposes to dually complete the well in the following manner:

1. Perforate the 7" casing within the approximate interval of 5500 - 5650' in the Blinebry formation in the Blinebry Gas Pool.
2. Set production type packer below these perforations at approximately 6400' to separate the two pay zones.
3. Produce the Drinkard Pool oil through the tubing and the Blinebry gas through the tubing-casing annulus.

(d) That the granting of this application for permission to produce the well as a dual completion with gas from the Blinebry and oil from the Drinkard is in the interest of conservation and the protection of correlative rights.
