

# NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

## MISCELLANEOUS NOTICES

Submit this notice in TRIPLICATE to the District Office, Oil Conservation Commission, before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

OIL CONSERVATION COMMISSION  
SANTA FE, NEW MEXICO

**Hobbs, New Mexico**  
(Place)

**March 25, 1957**  
(Date)

Gentlemen:

Following is a Notice of Intention to do certain work as described below at the.....

**Cities Service Oil Company** State **"P"** Well No. **1** in **F**  
(Company or Operator) (Unit)  
**SE** 1/4 **SW** 1/4 of Sec. **32**, T. **22**, R. **38**, NMPM., **Drinkard** Pool  
(40-acre Subdivision)  
**Lee** County.

### FULL DETAILS OF PROPOSED PLAN OF WORK (FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

State "P" No. 1 was drilled to 6983' and completed as an oil well in the lower Drinkard. The well is currently producing 7 barrels of oil per day with a GOR of 3960. Prior efforts to increase production have resulted in failure. It is proposed to plug back the well and recomplete as gas-oil and/or gas-gas dual completion from the Tubbs and Elinebry zones. The Tubbs zone will be perforated at an estimated depth of 6070' to 6275' and acid-frac with 10,000 gallons. The Elinebry zone will be perforated at an estimated depth of 5545' to 5610' and acid frac with 5000 gallons. The Elinebry in the east offset produces gas while in the West offset oil is produced. If the Elinebry produces oil in State P No. 1, it is proposed to use crossover equipment and produce the upper oil zone through the tubing and the lower gas zone through the tubing casing annulus.
