Total depth of well is 6900. We propose to run 5½" OD 14# and 15.5# J-55 casing and cement at about 6900' with 150 sacks cement. Upon cementing a maximum pressure build-up on casing will be recorded and pressure released at maximum pressure. After 1½ times maximum build-up, cement will be cored to obtain a sample of cement for inspection. If cement is found to have set properly remainder of plug will be drilled out. Casing will then be tested by applying a pressure of 800# and holding for thirty minutes. Full report will be furnished.
