Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

It is proposed to remove the production packer set @ 5728', which is isolating the Blinebry perforations (5489-5671') from the Drinkard perforations (6392-6963') and the Granite Wash perforations (7356-7391').

A retrievable bridge plug will be set @ 5728', temporarily abandoning the Drinkard and Granite Wash mentioned above. The production string will be run into the hole and we will produce from the existing Blinebry perforations.

We will apply for a downhole commingling permit when the Blinebry production declines sufficiently to make room for production from the other zones, according to Order #303-C.

NOTE: As per conversation with NMOCD, it is our understanding that Chevron has applied to plug and abandon the Blinebry formation in their Gutman #1 well, which is located in Unit N, Sec.19, T.22S, R.38E, Lea County, New Mexico.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
