be used for reporting
packer leakage tests
in Northwest New Mexico.

SOUTHEAST NEW MEXICO PACKER LEAKAGE TEST

Operator			Leads	New Mexico State	Well No.
LOCATION OF WELL	LINES	Sec.	Twp.	Rge.	County
	C	2	22S	37E	Lea
NAME OF RESERVOIR OR POOL		TYPE OF PROD. (Oil or Gas)	METHOD OF PROD. FLOW, ART LIFT	PROD. MEDIUM (Oil or Gas)	CHOKING SIZE
Upper Completion	Wantz Abo	Oil	Flowing	Tbg	32/64
Lower Completion	Wantz Granite Wash	Oil	Pumping	Tbg	64/64

FLOW TEST NO. 1

Both zones shut-in at (hour, date): 1300 hrs 4/5/87

Well opened at (hour, date): 1300 hrs 4/6/87

Indicate by (X) the zone producing	Upper Completion	Lower Completion
Pressure at beginning of test	315	Zero
Stabilized? (Yes or No)	Yes	Yes
Maximum pressure during test	320	Zero
Minimum pressure during test	310	Zero
Pressure at conclusion of test	320	Zero
Pressure change during test (Maximum minus Minimum)	10	Zero
Was pressure change an increase or a decrease?	Increase	---

Well closed at (hour, date): 1300 hrs 4/7/87	Total Time On Production	24 hrs
Oil Production During Test: 3.0 bbls; Grav. 40.2	Gas Production During Test	17 MCF; GOR 5667

Remarks: _____

FLOW TEST NO. 2

Well opened at (hour, date):	1400 hrs 4/8/87	Upper Completion	Lower Completion
Indicate by (X) the zone producing	X		
Pressure at beginning of test	320		5
Stabilized? (Yes or No)	No		No
Maximum pressure during test	320		10
Minimum pressure during test	50		Zero
Pressure at conclusion of test	50		Zero
Pressure change during test (Maximum minus Minimum)	270		10
Was pressure change an increase or a decrease?	Decrease		Decrease
Well closed at (hour, date):	1200 hrs 4/9/87	Total Time On Production	22 hrs
Oil Production During Test:	bbls; Grav.	Gas Production During Test	MCF; GOR
Remarks:			

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

SOUTHEAST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be conducted on each multiply completed well within seven days after initial completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such test shall also be conducted on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.

2. At least 22 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Other operators shall also be so advised.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilisation. Both zones shall remain shut-in until the well-head pressure in each has stabilised and for a minimum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued until the flowing well-head pressure has become stabilised and for a minimum of two hours thereafter, provided however, that the flow test need not continue for more than 24 hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the previously shut-in zone is produced.

7. All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked with deadweight values at least twice, once at the beginning and once at the end, of each flow test.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Division or Southeast New Mexico Packer Leakage Test Form X-Form 11-01-18, together with the original pressure recording gauge chart with all the deadweight pressures which were taken indicated thereon. In lieu of filing the aforesaid chart, the operator may construct a pressure versus time curve for each zone of each test, indicating therein all pressure changes which may be reflected by the gauge chart as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.
