### STATE OF NEW MEXICO ENERGY and MINERALS DEPARTMENT

## OIL CONSERVATION DIVISION

This form is not to be used for reporting packer leakage tests in Northwest New Maxico

# SOUTHEAST NEW MEXICO PACKER LEAKAGE TEST

Communication				New Mexico "S" State			
LOCATION OF WELL	Unit	Sec. 2	Twp. 2	2-S	Rge. 371	County	Lea
	NAME O	F RESERVOIR OR POOL	TYPE OF PR (Oil or Gai		HOD OF PROD. OW, ART LIFT	PROD. MEDIUM (Tog or Cag)	CHOKE SIZE
Upper Compl.	Wantz Abo	)	0i1	F	low	Tbg.	. 500
Lower Compl.	Wantz Granite Wash		011	P	ump	Tbg.	Open

### FLOW TEST NO. 1

Both zones shut-in at (hour, date,	<u>6:00 P.M.</u>	2-20-86		
Well opened at (hour, date):			Upper Completion	Lo <b>wer</b> Completion
Indicate by (X) the zone producin				
Pressure at beginning of test		· · · · · · · · · · · · · · · · · · ·	40	80
Stabilized? (Yes or No)			Yes	Yes
Maximum pressure during test			40	80
Minimum pressure during test			40	80
Pressure at conclusion of test			40	80
Pressure change during test (Maxis	num minus Minimum)		0	0
Was pressure change an increase o	a decrease?			
Well closed at (hour, dste):	3:00 A.M. 2-22-86		Hrs.	
Oil Productio <b>n</b> During Test: <u>2</u> bl	ols; Grav. <u>41.6</u>	Gas Production ; During Test <u>183</u>	MCF; GOR	
Remarks:

Title

SOUTHEAST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracrure treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.

2 At least 72 bours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3 The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shuth until the well-head pressure in each has stabilized and for a minimum of two hout phereafter provided however, that they need not remain shut-in more than 4 hours.

4. For Flow Test No. 1, one zone of the dual completions half be produced at the formal rate of production while the other zone remains shut-in. Such test shall be produced until the flowing wellhead pressure has become stabilized and be a minimum of two hours thereafter, provided however, that the flow test need not consider for more than 24 hours.

Operator <u>Exxon Corporation</u> Bv L. McBee Di Operations Superintendent Title

Date

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the previously shut-in zone is produced.

7. All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked with deadweight tester at least twice, once at the beginning and once at the end, of each flow test.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Division on Southeast New Mexico Packer Leakage Test Form Revised 11-01-58, together with the original pressure recording gauge charts with all the deadweight pressures which were taken indicated thereon. In lieu of filing the aforestat charts, the operator may construct a pressure versus time curve for each tone of each test, indicating thereon all pressure charges which were taken. If the pressure curve is submitted, the original charts must be permanently filed in the operator's office. Form C-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio.
