

MULTI-POINT SURFACE USE AND OPERATIONS PLAN
Yates Petroleum Corporation
Antelope "LY" Federal #1
1980' FNL and 1980' FEL

This plan is submitted with Form 9-331C, Application for Permit to Drill, covering the above described well. The purpose of this plan is to describe the location of the proposed well, the proposed construction activities and operations plan, the magnitude of surface disturbance involved, and the procedures to be followed in rehabilitating the surface after completion of the operations, so that a complete appraisal can be made of the environmental effect associated with the operation.

1. EXISTING ROADS

Exhibit "A" is a portion of a USGS topographic map showing the wells and roads in the vicinity of the proposed location. The proposed wellsite is located approximately 49 miles east of Carlsbad, New Mexico, and the access route to the location is indicated in red and green on Exhibit "A".

DIRECTIONS:

1. Proceed south from Carlsbad on Highway 285 for a distance of approximately 10 miles.
2. Turn east onto State 31 for approximately 8 miles.
3. Turn southeast onto State 128 and go for approximately 19 miles. Then turn northeast to the El Paso Natural Gas Company pipeline road.
4. Go for 9.2 miles and turn north.
5. Continue for 1.2 miles. The new road will start here.

2. PLANNED ACCESS ROAD

- A. The proposed new access will be approximately 1800' in length from point of origin to the edge of the drilling pad. The road will lie in an east-to-west direction.
- B. The new road will be 12 feet in width (driving surface).
- C. The new road will be covered with the necessary depth of caliche or other suitable material. The surface will be crowned, with drainage on one side.
- D. The new road has been flagged and the route of the road is clearly visible.

3. LOCATION OF EXISTING WELLS

- A. There is not any drilling activity within a one-mile radius of the wellsite.

4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES

- A. There are no production facilities on this lease at the present time.
- B. In the event that the well is productive, the necessary production facilities will be installed on the drilling pad. If the well is productive of oil, a gas or diesel self-contained unit will be used to provide the necessary power. No power will be required if the well is productive of gas.
