

7.
  - E. Oil produced during operations will be stored in tanks until sold.
  - F. Current laws and regulations pertaining to the disposal of human waste will be complied with.
  - G. Trash, waste paper, garbage and other debris will be buried in a separate trash pit and covered with a minimum of 24 inches of dirt. All waste material will be contained to prevent scattering by the wind. If well is productive, maintenance waste will be placed in special trash cans and hauled away periodically.
  - H. All trash and debris will be buried or removed from the wellsite within 30 days after finishing drilling and/or completion operations.
8. ANCILLIARY FACILITIES:
  - A. No air strip, camp or other facilities will be required.
9. WELLSITE LAYOUT:
  - A. Exhibit "D" shows the relative location and dimensions of the well pad, mud pits, reserve pits, trash pit, and major rig components. The pad and pit area has been surveyed, staked and flagged.
  - B. There will be some minor cutting and filling of the wellsite because of the land slope to the east, 1 foot in 200 feet.
  - C. The reserve pit will be plastic lined.
10. PLANS FOR RESTORATION OF THE SURFACE:
  - A. After completion of drilling and/or completion operations all equipment and other material not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk to leave the wellsite in an aesthetically pleasing a condition as possible.
  - B. Any unguarded pits containing fluids will be fenced until they are filled.
  - C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management and the United States Geological Survey will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled within 90 days after abandonment.
11. OTHER INFORMATION:
  - A. Topography: The land surface in the vicinity of the wellsite and the access road is relatively flat with a gentle slope of about 25 feet to the mile to the East.
