

11. B. Soil: Soil is a fine sandy clay loam underlain by caliche.
- C. Flora and Fauna: The vegetative cover consists of very sparse miscellaneous grasses, yucca, mesquite, cactus, broom snakeweed, grama grass, alkali sacaton and other miscellaneous desert flowers and weeds. The wildlife in the area would consist of antelope, jackrabbits, cottontail rabbits and other typical semi-arid desert wildlife. The area is used for cattle grazing.
- D. Ponds and Streams: There are no rivers, streams, lakes or natural ponds in the area, however there are windmills and ranch tanks within a mile to the southeast.
- E. Residences and Other Structures: There are no occupied dwellings within several miles of the wellsite. The nearest windmill is about a mile southeast of the well location.
- F. Land Use: Cattle grazing.
- G. Archaeological and Historical Sites: There is no evidence of any significant archaeological, historical or cultural sites in the area of the proposed wellsite or access road. An archaeological survey has been conducted by New Mexico Archaeological Services, Inc. of Carlsbad, New Mexico and this report has been submitted to the appropriate government agencies.
- H. Surface Ownership: The wellsite is on fee land owned by a Dr. Maddox. The oil and gas minerals are federally owned. An agreement has been reached between Natomas North America, Inc., and Dr. Maddox concerning surface damages and restoration of the surface, after operations have been completed. Part of the access road will be on state land and an agreement has been made with the state for permission to cross this surface.

12. OPERATOR'S REPRESENTATIVE:

- A. The field representative responsible for assuring compliance with the approved surface use and operations plan is as follows:

Mr. Jack G. Goodwin, Dist. Exploration Mgr.
Natomas North America, Inc.
1010 Gibraltar Savings Center
200 N. Loraine St.
Midland, Texas 79701
