17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well reached T.D. of 12,504' on 7/3/84. An attempt to complete as an Atoka-Strawn producer resulted in a high pressure-low volume gas well that is of marginal commercial value at current market conditions. It is proposed to plug the well back to the Bone Springs formation as set out as follows:

- 1) A cast iron bridge plug will be set at 10,790' and 35' of cement will be placed on top of the bridge plug.
- 2) The well will be perforated with 19 holes between the interval of 9700' to 9800'.
- 3) The well will be acidized with 10,000 gallons of 28% NELST acid with ball sealers and nitrogen.
- 4) The well will be cleaned up and put on production.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
