17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

This well was producing by closed system gas lift from the Atoka-Strawn gas-condensate horizon of the Antelope Ridge Field (Atoka) when it was shut down by the gas purchaser who removed his gas compressor. The well has been shut in and now has a tubing pressure in excess of 3100 psig. All equipment is currently in place with the exception of a compressor.

It is requested that this well be put on a temporarily shut-in status for a period of 60 days in order that the current Operator can clear title to acquire full working interest in the leases and make arrangements to put the well back on production. The well was capable of commercial production when last produced and will be put back on production as soon as leasehold ownership is resolved and a compressor is installed.
