Leave hole at 6:00 AM and drive to location. Crew and fisherman were already there.

8:10 AM Pick up tools with 4 3/4 bit and began drilling plug. Drilled approx. 5 ft. and fell through cement at 8:35 AM.

The pressure under the plug moved our tools up hole about 5 feet until the rotating head caught in the side of the derrick and held long enough for the pressure to bleed off. We then pulled out of hole and changed 4 3/4 bit for a 7 7/8" bit and reenter well.

1:30 PM Depth 200' and drilling is slow. Very little cement in returns. Seems to be chewing up some plastic and paper.

Are able to pick up collars and are pushing trash down as we drill out cement stringers.

Tag up on what we think is top of drillpipe left in hole at 2235'. This could be the top of a cement plug set above packer at 2800'.

Pull out of hole with tubing and tools and lay down collars.
