RE: Exception to Division Rule 104.C

Republic No. 1-5

SW/4 NE/4 Sec. 5-T22S-R37E Lea County, New Mexico

L1703010W

Dear Mr. Lanning

On November 6, 1997 The Home-Stake Royalty Corporation filed an application with the New Mexico Oil Conservation Division requesting administrative approval of an unorthodox location for the subject well. A copy of the application, exhibits and attachments is enclosed for your information.

The well has been permitted to be drilled 330' FNL & 330' FEL of the 40-acre spacing unit consisting of the SW/4 NE/4 Sec. 5-T22S-R37E (1650' FNL & 1650' FEL of Section 5) as shown on attached application. We are planning to drill a vertical well to produce the Fusselman formation which is truncated by the Permian near the East line of the spacing unit (See enclosed subcrop map). The Fussleman is a water drive reservoir with no penetrations in this fault block, therefore, the depth of the water table has not been established. If the vertical well penetrates the Fusselman at a structural position below the water table, it is proposed to sidetrack the hole a maximum distance of 230' to the East to attempt to penetrate the Fussleman above the water table. The Fussleman beds are dipping to the West at approximately 11°. We will gain approximately 45' of structural position in the 230' of Eastward movement. (See enclosed cross-section). Penetrating the Fussleman at this point will result in an unorthodox location for the 40-acre spacing unit. We have, therefore, requested administrative approval for an exception to Division Rule 104.C to permit Home-Stake to expand the window and allow the well to legally produce from the Fusselman at a distance no closer than 100' FEL spacing unit (1420' FEL Sec. 5).
