Ref: Langlie Lynn Queen Unit #23
API # 30-025- 34919

Dear Ms. Menoud:

A field inspection was performed on the Langlie Lynn Queen Unit #23, 2-20-2003. The well is producing. Its current status is shown as a water injection well. The well is producing through 18/64 choke into another flow line to a header, which is open to a meter. The master valve is open and chained and locked in that position. Please submit to the New Mexico Oil Conservation Division, Hobbs office a C103 Sundry Notice showing the status change and a C104 designating a transporter for the gas and any related liquids or oil produced. This information is required by March 10, 2003. If the information is not received by that date the well will be shut in until such time as the proper paperwork is received.

Sincerely

Chris Williams District 1 Supervisor

CC: Karen Sharp
