The elevation of the derrick floor above sea level is 3521.3 ft. Ground Level Elevation: 3512.0 ft. Elevation of the KDB, the measurement datum, is 3523.8 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Commencing at 7:00 a.m. MST 2-21-61, well was plugged as follows: (1). With open-ended drill pipe at 4913, spotted 50 sx. regular neat cement, displacing to equilibrium, to leave a plug from 4913 to a calculated top of 4737. (2). With open-ended drill pipe at 1300', spotted 75 sx. of regular neat cement, displacing to equilibrium, to leave a plug from 1300' to a calculated top at 1056. (3). With open-ended drill pipe at 425, spotted 50 sx. regular neat cement, displacing to equilibrium, to spot a plug from 425 back to 270', sealing the surface casing shoe located at 393'. (4). Installed a 15 sack plug in the top of the 8-5/8" OD casing, cementing in place a piece of 4" pipe, such that the top of 4" pipe is 4' above ground level, and the name of the company, name of the lease, well number, and well location is stenciled on the pipe. Plugging was completed at 1:00 p.m. 2-21-61. Released Leatherwood Drilling Company rig at 3:00 p.m. MST 2-21-61. (See attached description of coring operations).

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
