Elliott-Federal

Well No. **3** is located **330** ft. from **NOX** line and **330** ft. from **E** line of sec. **27**

SE/4 SE/4 Unit 2 **26-0** **12-0** **RPM**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
El Mar-Delaware **Lea** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3,119** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Proposal is to set 3-5/8" O.D. 20 lb. casing into red bed at approximately 275 feet and circulate cement to the surface. To drill approximately 100 feet into the Delaware sand to a total depth of 4000 feet. To set 4-1/2" O.D. 9.50 lb. casing at total depth and cement with 125 sacks of cement. Completion will be through perforations opposite Delaware formation after acid and fracture treatment. The well will be rotary cored and logs run. Approximate spudding date will be November 17, 1959 with rotary tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
