17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

To repair a casing leak in the 4½ casing in this well, the following procedure is proposed:

- (1). Come out of hole with downhole pump, rods and tubing.
- (2). Locate exact position of hole by pumping into annulus and observing where the water enters the 4½ casing. If this procedure fails, the hole will be found electronically.
- (3). Take apart wellhead and weld on 4½ pull nipple.
- (4). Stretch 4½ off of slips, pull 1 point (1000#) over strung weight, and put 1 round left hand torque into pipe.
- (5). Shoot string shot opposite collar below hole in casing, repeat procedure until pipe comes unscrewed.
- (6). Pull damaged joint and run back new joint 4½ casing to replace same.
- (7). Screw new joint into string where old joint unscrewed, tighten up string with power tongs.
- (8). Test 4½ string to 500# by setting retrievable bridge plug below where new joint screwed into string. If string tests, pull plug out 4½ and return well to production.

18. I hereby certify that the foregoing is true and correct
