(Field)

Lea
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 3365 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Subject well is to be perforated from 3550' to 3579' with 3 jet shots per foot, a total of 87 shots. Following the perforating, it is our intention to acidize with 3000 gallons of acid (Western Acid Company).

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
