

- 11/20/58 Drilling at 5904' in sand and shale. 2 3/4° at 5882'.
- 11/21/58 Drilling at 6125' in lime and shale. 2 1/4° at 5972'.
- 11/22/58 Drilling at 6321' in sand and lime. 1 3/4° at 6244'.
- 11/23/58 Drilling at 6471' in lime. 1° at 6466'.
- 11/24/58 Drilling at 6635' in lime. 1 3/4° at 6570'. Have drilled in alternating sand and lime beds since last report. No oil shows since last report. Some shale gas shows which is characteristic of the area. Testing of such shows not warranted.
- 11/25/58 6:00 A.M. 6736' in dolomite. Drilling 9 mins. to a foot. No oil shows between yesterday's total depth and today's. Shale gas shows continuing. Lack of penetration in past 24 hours due to mechanical difficulties on rig causing rig to be shut down from 9:00 A.M. Nov. 24th to 1:00 A.M. today. 3/4° at 6690'.
- 11/26/58 6:00 A.M. 6891' in dolomite. Drilling 10 to 12 mins. to a foot. Have penetrated alternating dolomite, sandy dolomite and sand sections during past 24 hours. No shows. 1° at 6805'.
- 11/27/58 Drilling at 7009' in limestone. 3/4° at 6905'.
- 11/28/58 Drilling at 7112' in limestone.
- 11/29/58 T.D. 7154'. DST #2 in limestone 7140 - 7254'. Open 2 hours, light steady blow throughout. Recovered 290' gas and slight oil cut mud. Hydrastatic pressure 3610 in and out. IFP 105. FFP 210. SIP 30 mins. 1945 but still building est. 2000. 5/8 bot. choke and 1" top.
- 11/30/58 T.D. 7360'. DST #3 in limestone 7250' - 7360'. Open 2 hours, fair blow throughout. Recovered 540' heavily oil and gas cut mud. Oil gravity 35°. Hydrastatic 3735 in 3720 out. IFP 340. FFP 395. 30 mins. SIP 620. Accuracy of this SIP questioned. Probable instrument failure.
- 12/1/58 6:00 A.M. 7429' in gray dense limestone. There were additional shows of porosity with stains and florescence to 7390'.
- 12/2/58 T.D. 7503'. Making a trip in preparation for DST #4. Approximate interval to be tested is 7350' to 7503'.
- 12/2/58 DST #4 from 7350' - 7503' recovered 600' heavily oil and gas cut mud. More than last. Gas to surface in one hour and 5 minutes. IFP 190, FFP 305, 30 mins. SIP 690. No water.
- 12/3/58 T.D. 7626' in limestone. Porosity improving and oil and gas shows continuing since DST #4 bottomed at 7503'. Mud logging unit recorded high gas content in this interval.
