1. *Phragmites australis* (Cav.) Trin. ex Steud.

2. *Phylogenetic relationships*—The phylogenetic relationships among the 10 species of *Phragmites* were determined using the maximum parsimony method. The analysis was performed using the computer program PAUP 4.0 (Nelson & Olmstead 1992). The analysis was based on the 1000 characters of the DNA sequence data. The characters were ordered by the following criteria: (1) parsimony, (2) consistency, (3) homoplasy, (4) character state, (5) character position, and (6) character frequency. The analysis was performed using the following parameters: (1) heuristic search, (2) 1000 random addition sequence, (3) 1000 random addition sequence, (4) 1000 random addition sequence, (5) 1000 random addition sequence, and (6) 1000 random addition sequence. The analysis was performed using the following parameters: (1) heuristic search, (2) 1000 random addition sequence, (3) 1000 random addition sequence, (4) 1000 random addition sequence, (5) 1000 random addition sequence, and (6) 1000 random addition sequence.
