OPERATIONS

New Mexico Oil Conservation Commission
P.O. Box 871
Santa Fe, New Mexico

Attention: Mr. Warren Mankin

Gentlemen:

With reference to our application dated November 3, 1955 for a 160 acre non-standard gas proration unit in the Southeast 1/4 of Section 12, Township 24S, Range 36E, Lea County, New Mexico, for our Toby #1 casing completion, we submit herewith a revised Paragraph 1 to be substituted in this application:

1. Our Toby #1 well was originally completed on February 19, 1937 as an oil well. 7" casing is set at 3256'. A formation packer is set at 3429' which effectively separates the Jalmat gas sand in the Upper Seven Rivers from the Langlie Mattix oil sand in the Lower Seven Rivers-Queen. The top of the Queen is at 3575'. This allows gas from the Jalmat Pool (Upper Seven Rivers) to be produced through the casing. We propose to request permission to complete this well as a dual completion. A packer test on November 2, 1955 showed that this packer effectively separates these two zones. This packer test was witnessed by Mr. Reider and Mr. Armstrong with the Commission.

We respectfully request that this corrected Paragraph be incorporated in our application for this non-standard unit.

Copies of this letter are being forwarded to Continental Oil Company, Skelly Oil Company, and King, Warren, and Dye in order to complete their records.

Yours very truly,

Paul C. Wright
