6. *Conclusions*—The results of this study suggest that the use of a single, low-dose, short-acting benzodiazepine, such as lorazepam, may be a safe and effective method of sedation for the conscious, cooperative, and nonventilated patient with a head injury. The use of a single, low-dose, short-acting benzodiazepine may also be a safe and effective method of sedation for the conscious, cooperative, and nonventilated patient with a head injury.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated in the medium containing 100 mg/ml of tetracycline and 100 mg/ml of kanamycin for 24 h. The cell concentration of the *Agrobacterium* strains was adjusted to 1.0 × 10<sup>8</sup> cells/ml. The cell suspension was then mixed with the plant protoplasts and incubated for 2 h. The protoplasts were then incubated in the medium containing 100 mg/ml of tetracycline and 100 mg/ml of kanamycin for 24 h. The transformation efficiency was determined by the number of colonies formed on the medium containing 100 mg/ml of tetracycline and 100 mg/ml of kanamycin. The data are the mean ± SD of three independent experiments.
