

Detail of work

A. H. Myers "A" #1, Cooper Field

Original TD 3514', the plugged back depth was 3234' when abandonment operations commenced 11-10-40. The bottom was plugged off to 3050' w/ 40 sacks cement. The 7" casing was shot loose and recovered 2040' of same, the hole was mudded to this point 11-24-40 and a 10 sack cement plug set in top of the 7" remaining in hole. Plug was tested and witnessed by USGS engineer 11-26-40.

The 9-5/8" intermediate casing was shot loose and 450' recovered the hole filled w/ heavy mud and a 10 sack cement plug run in top of 9-5/8" remaining in hole. Original 16" OD surface casing set at 240' cemented with 175 sacks was left intact, filled w/ mud and a 10 sack cement plug set in top of this pipe. A 4" pipe marker was cemented in place extending 5' above the ground level and cellar filled to conform with the surrounding terrain.

Work was completed November 30, 1940.
