DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

On October 21, 1935 an Otis 7" x 5' bottom hole choke was run and set to act as a bridge. Bailing tests revealed that the choke was not holding so a Baker Cast Iron Casing Bridge was set at 3449'. The fluid was bailed down to 3300' and the bridge held O. K. On November 6, 1935 the casing was perforated with a Lane Wells Gun Fire Perforator at 3300, 3310, and 3320. No Shows. On November 7, 1935 the casing was perforated at 3330, 3340, 3350, 3360, 3370, 3380, 3390, 3395, 3397, 3399, 3402, 3403, 3405, 3406, 3407, 3408, 3410 and 3415. The well was then killed and the bridge drilled out. We picked up 1,750 M cubic feet of gas from 3400 to 3410. The well was put back on production and is now flowing at the rate of 288 barrels of oil with 97% water per day.
