 Title Oil & Gas Inspector

THEORY OF THE EARTH

CHAPTER I. OF THE ORIGIN OF THE EARTH.

The origin of the earth is a subject which has attracted the attention of philosophers from the earliest ages. The ancients were divided into two schools, the one of which held that the earth was created out of nothing, and the other that it was formed out of pre-existing matter. The former of these opinions is now generally abandoned, and the latter is the one which is now generally adopted.

SECTION I. OF THE ORIGIN OF THE EARTH.

The first question which presents itself to the mind is, whether the earth was created out of nothing, or whether it was formed out of pre-existing matter.

The former of these opinions is now generally abandoned, and the latter is the one which is now generally adopted. The latter opinion is supported by the fact, that we find in the history of the earth, a series of changes, which seem to point to a common origin.

The changes which we find in the history of the earth, seem to point to a common origin.

The changes which we find in the history of the earth, seem to point to a common origin.
