

NEW MEXICO OIL CONSERVATION COMMISSION
Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF	X	REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Hobbs, New Mexico.
Place

May 31, 1937.
Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

THEORY OF THE EARTH

CHAPTER I

THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and is the only one of which we have direct knowledge. It is a sphere, and is composed of a solid inner core, a liquid outer core, and a solid crust. The crust is the part of the Earth which we live on, and is composed of rocks and minerals. The crust is divided into continents and oceans. The continents are the large land masses, and the oceans are the large bodies of water. The Earth's history is the story of its development from its formation to the present day.

The Earth's history is divided into three main periods: the Pre-Cambrian, the Cambrian, and the Post-Cambrian. The Pre-Cambrian period is the earliest, and is characterized by the formation of the Earth's crust and the development of the first life forms.

The Cambrian period is the period of the first great mass extinction, and is characterized by the development of the first complex life forms. The Post-Cambrian period is the period of the second great mass extinction, and is characterized by the development of the first complex life forms.

The Earth's history is a story of change and development, and is a testament to the power of the natural world. It is a story that we can learn from, and that we can use to guide our lives.

The Earth's history is a story of change and development, and is a testament to the power of the natural world. It is a story that we can learn from, and that we can use to guide our lives.

• The Earth is a planet of the solar system, and is the only one of which we have direct knowledge.

• The Earth is a sphere, and is composed of a solid inner core, a liquid outer core, and a solid crust.

• The crust is the part of the Earth which we live on, and is composed of rocks and minerals.

• The crust is divided into continents and oceans. The continents are the large land masses, and the oceans are the large bodies of water. The Earth's history is the story of its development from its formation to the present day.

• The Earth's history is divided into three main periods: the Pre-Cambrian, the Cambrian, and the Post-Cambrian. The Pre-Cambrian period is the earliest, and is characterized by the formation of the Earth's crust and the development of the first life forms.

• The Cambrian period is the period of the first great mass extinction, and is characterized by the development of the first complex life forms. The Post-Cambrian period is the period of the second great mass extinction, and is characterized by the development of the first complex life forms.
