

OIL CONSERVATION COMMISSION

P. O. BOX 2045

HOBBS, NEW MEXICO

Date March 6, 1956

TO:

Skelly Oil Co.

Box 38

Hobbs, New Mexico

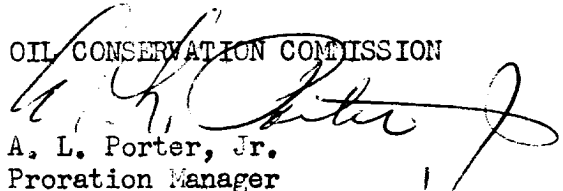

Gentlemen:

In accordance with the provisions of Commission Order No. R-767,  
your C. W. Sims #1-C 10-23-37,  
Lease and Well No. S-T-R,  
which is producing from the Queen formation, has been  
placed in the Langlie-Mattix Pool, and from this date forward  
will be subject to the Commission's rules and regulations governing  
that pool.

You are hereby instructed to file Form C-110 in quintuplicate with  
the Hobbs office showing the change in pool designation.

All future Commission reports for this well must be filed under  
the name of the pool in which it is now located.

OIL CONSERVATION COMMISSION

  
A. L. Porter, Jr.  
Proration Manager

Transporter-

1. The first part of the paper discusses the importance of understanding the underlying mechanisms of the system. This is crucial for developing effective interventions and policies. The authors argue that a comprehensive understanding of the system's components and their interactions is essential for any meaningful analysis.

2. The second part of the paper focuses on the methodology used in the study. The authors describe the data collection process, the statistical models employed, and the validation techniques used to ensure the reliability of the results. They emphasize the importance of transparency in reporting the methods and the steps taken to minimize bias and error.

3. The third part of the paper presents the results of the study. The authors show that the proposed model accurately predicts the system's behavior across a range of conditions. They also discuss the implications of these findings for the field, highlighting the potential for the model to be used in future research and practical applications. The authors conclude that the study provides a solid foundation for further exploration of the system's dynamics.

4. The final part of the paper discusses the limitations of the study and suggests directions for future research. The authors acknowledge that the current study has some limitations, particularly in terms of the scope of the data and the complexity of the model. They suggest that future work should aim to address these limitations by expanding the data set and developing more sophisticated models. The authors also discuss the potential for the study's findings to inform policy and practice, and they provide recommendations for further research in this area.
