(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 3908 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to TD of 3874' in Line but failed to encounter commercial production. Temporarily abandoned 5-5-48 pending development of deep production on offset lease.

To further evaluate the possibility of obtaining commercial production from this well it is proposed to clean out the well to TD and run Radioactive Survey. Upon completion of this work the well will be filled with mud and shut in pending further study.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
