Detailed account of work done, nature and quantity of materials used, and results obtained.

Production from this well has been on a gradual decline for sometime and during the month of October, 1961, production from the well was 100% water. The well has been shut in and temporarily abandoned, pending further development in the area and/or evaluation of water flood project now in progress, which may justify performing remedial work necessary to return the well to an economic oil production status. This report is submitted for the purpose of removing the well from the oil proration schedule. The daily allowable assigned to the well is four (4) barrels.
