17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well is presently an oil well in the Langlie-Mattix Pool completed at T.D. 3810', P.B.T.D. 3758' and presently producing from O-H 3386-3758'. We propose to recomplete as a Jalmat Gas Well as follows:

1. Pull rods and tubing, clean out to total depth 3810', log well through all possible producing intervals.
2. Set bridge plug below Jalmat at approximately 3300', dump sand on plug.
3. Perforate Jalmat zone as indicated on Gamma Ray Neutron Log for limited entry stimulation, frac with gelled water and sand.
4. Run tubing with Baker Lok-Set Packer, swab well.
5. Return to production.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
