(Range)

**R35N**  
(Meridian)

**Langlie-Mattix**  
(Field)

**Lea**  
(County or Subdivision)

**New Mexico**  
(State or Territory)

The elevation of the ~~water level~~ **ground level** above sea level is **3338.5** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to rotary drill an 11" hole and set 8-5/8" 24# casing at 375' and cement to surface. The well will then be rotary drilled to an estimated depth of 3500' with a 6-3/4" hole and set 4-1/2" 9.5# oil string casing at total depth. The oil string will then be cemented with 200 sacks and then cemented with 100 sacks through a stage tool set at approximately 1125' to isolate the Santa Rosa water zone from salt section. Top of salt section estimated at 1300'. Top of Queen estimated at 3430'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company **SAMERAN OIL CORPORATION**
