Re: Resler and Sheldon
Steeler B No. 1-I
Sec. 20-23-37

Dear Mr. Montgomery:

A detailed study of the geology of Resler and Sheldon's well, the Steeler B No. 1, located in the NE/4 of the SE/4 of Section 20 Township 23 South Range 37 East, shows that this well is definitely producing from the Grayburg formation.

The top of the Grayburg formation was found to be at 3591' with perforations at 3685' to 3689'. This well is completed 84' to 88' below the top of the Grayburg, or below the base of the Queen formation.

Since the well is not completed near a pool producing from the Grayburg formation, a new pool will have to be created.

Yours truly,

John W. Runyan

See. 21-22-23

A detailed study of the geology of Hobbs and Sheldon's well, the latter is located in the NW 1/4 of the SE 1/4 of Section 22, Township 23 North Range 12 East, Tarrant County, Texas. This well is believed to be producing from the Grayburg formation.

The top of the Grayburg formation was located at 3682' in the well. This well is completed at 3682' to 3683'. This well is completed at 3682' below the top of the Grayburg, or below the base of the Green formation.

Since the well is not completed near a good producing from the Grayburg formation, it is believed that the well will have to be abandoned.

Yours truly,
John W. Brown
