DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

After reaching a depth of 9292', it is planned to commence coring operations with 6-1/8" diamond core barrel, on January 9, 1949, and core to the base of the McKee sand member of the Simpson formation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
