Dual Completion Application  
TEXACO Inc. E. E. Blinebry (a)  
Well No. 2, Jalmat (Gas) and Langlie  
Mattix Pools, Unit I, Sec. 31, T-23-S,  
R-37-E, Lea County, New Mexico

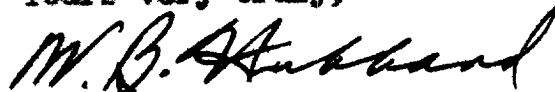

Gentlemen:

Attached are necessary forms for application for administrative approval to dually complete the subject well in the Jalmat (Gas) and Langlie Mattix Pools.

The well has been completed with 5-1/2 inch casing set at a total depth of 3663 feet with the Langlie Mattix oil zone (lower completion) producing through 2-3/8 inch OD tubing and the Jalmat (Gas) zone (upper completion) producing through the casing-tubing annulus. The Jalmat (Gas) completion will produce efficiently through the casing-tubing annulus as there are no liquid hydrocarbons being produced with the gas. During the completion test ending at 1:00 AM November 17, 1960, the Jalmat zone flowed dry gas for 12 hours at a rate of 2095 MCFPD and a surface flowing pressure of 600 psi. The Langlie Mattix zone flowed 63.85 barrels of oil and 1.15 barrels of water with a gas-oil ratio of 2615 cubic feet per barrel during a six hour completion test ending 1:00 AM November 13, 1960.

In view of the data presented above, it is respectfully requested that administrative approval be granted TEXACO Inc. to dually complete the subject well with the Langlie Mattix zone producing through the 2-3/8 inch tubing and the Jalmat (Gas) zone producing through the 5-1/2 inch casing-2-3/8 inch tubing annulus.

Yours very truly,

W. B. Hubbard  
Assistant District Superintendent

LMF-MAB
