Re: El Paso's Shell - State No. 13  
Section 32, T23S, R37E  
Lea County, New Mexico

Gentlemen:

This is to advise that Getty will have no objection to injection into the proposed interval of the Grayburg Formation in the subject well.

The prognosis for the proposed completion procedure is satisfactory; except for one item. We propose that Step 6 be revised to provide for separate squeezes on the Yates and Queen Sand perforated intervals in order to insure isolation of the Queen Sand interval. This is the principal zone under flood in this area of Myers Langlie Mattix Unit; and every effort must be expended to insure confinement of injected water to the flood interval in this area.

We have added this stipulation to the approval form and hereby return two (2) executed copies for your further handling.

Very truly yours,

*Audra B. Cary*
