(State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well with rotary tools at the above location to a depth of approximately 9,800 feet unless commercial oil or gas production is encountered at a lesser depth. All casing will be cemented in accordance with methods approved by the U. S. Geological Survey. Any other special requirements will be complied with. The following casing pattern will be used:

- 13-3/8" Casing to be set at approximately 300 feet, cemented with 175 sacks.
- 9-5/8" Casing to be set at approximately 2,900 feet, cemented with 1400 sacks.
- 7" OD Casing to be set at approximately 9,650 feet, cemented with 500 sacks.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
