The following information is being furnished to you for your information:

Perforated 3124-29, 3148-53, 3182-87, 3230-35, washed perforations with 1000 gallons regular acid, treated perforation, recovered only load oil. Set cast from retainer at 3115 squeezed above perforation with 150 sacks regular cement plus 25 calcium chloride plus 200 sacks almost neat cement. Reversed out 13 sacks left one foot cement on top retainer. Perforated 3095-3105 with 4 shots per foot, tested perforation, recovered only load oil and water. Set 35 retainer at 3070 and squeezed perforations 3095-3105 in two stages, first stage with 150 sacks regular plus 25 calcium chloride followed with 100 sacks almost neat cement. Cement went in on vacuum. Second stage with 100 sacks almost neat cement. Formations squeezed with 4000 PSI. Well producing from perforation 2950-2958 (7 shots per foot)

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or sealing.
