DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On August 10, at 8:00 A.M., more than 72 hours after being cemented, the 7", 20# seamless steel casing, at 3250', was tested for water shut-off. Top of the cement was found at 3215'. Casing test made after bailing dry and allowed to stand three hours. No fluid entered. Cement plug drilled to 3255' and bailed dry, stood three hours for test and no fluid entered. Casing tested for water shut-off, test considered satisfactory. Drilling ahead in hard lime.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
