Mr. M. J. Heald,
Supt., The Texas Company,
Elk, Texas.

Dear Sir:

This is to confirm our telephone conversation this morning in which approval was given to cement the 1-5/8-inch casing at the base of the anhydrite at about 1150 feet. You stated that there is no water between this casing point and the top of the salt in this area and that the top of the anhydrite is expected at about 1000 feet.

Very truly yours,

SUPERVISOR, OIL & GAS OPERATIONS,

THOMAS G. TAYLOR,
Acting Engineer in Charge.
