The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location with rotary tools to a depth of approximately 3250'. All casing strings will be cemented in accordance with approved methods of the U. S. Geological Survey.

It is planned to use the following casing pattern: 7 5/8" casing to be set at approximately 1200' and cemented with approximately 415 sacks. Cement to circulate to surface. 5 1/2" casing to be set at approximately 3250' and cemented with approximately 730 sacks, exact amount to be determined by Caliper and Temperature Surveys. 5 1/2" casing to be perforated opposite main pay zone.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
