El Paso, Texas October 29, 1948

Well No. 204 is located 2000 ft. from S line and 1000 ft. from E line of sec. 31

Sec. of Rec. Sec. 31. 26-6 87-2 N. L. P. E.
(4 sec. ad. sec. No.) Twp. Range
Shades I. C. County New Mexico
(P.M.D.) (City or Suburbance) State or Territory

The elevation of the derrick floor above sea level is 8078 ft. (approx.)

DETAILS OF WORK

(State names of and expected depths to objectives such as: upper shale, weathered, and limestone; proposed casing, indicate shoulder joint, cementing points, and all other important proposed work.)

For your consideration and approval. Proposed salvage program:
Pull 1177' of 8 1/2" casing and 3007' of 7" casing.

Proposed plugging program: A cement ring, 50' in length, extending from below the 7" casing up into the casing. A cement plug, 50' in length, extending from above the 7" casing stub down into the stub. A cement plug, 50' in length, extending from below the 8 1/2" casing up into the casing. A regulation marker cemented in a plug at the surface. Intervals between cement rings to be filled with heavy mud.

The present total depth is 8292'. This well made very little oil after initial production and was converted to a gas well. However, after a very short period of time, it failed to produce gas and has been inactive for over 12 months. Your immediate approval will be appreciated.

I understand that this plan of work must receive approval in writing by the Geological Survey before it can be carried out.
